Rotational Excisional Atherectomy

Continuous Active Aspiration

Rotating helix creates continuous negative pressure at tip; actively aspirating and transporting material into a collecting bag.

Rotating Abrading Vortex

Additional luminal gain is achieved by a vortex created around the rotating cylinder. Large side windows further break down and efficiently remove detached material.

Modifying Beveled Tip

Rotating atraumatic catheter head with blunt facets modifies and detaches mixed morphology lesions.

RotarexTM

Rotational Excisional Atherectomy System

The Straub Endovascular System is herein referred to as the BD RotarexTM Rotational Excisional Atherectomy System. When operated with a RotarexTM single use catheter, the System is intended for use as an atherectomy device and to break up and remove thrombus from upper and lower extremity peripheral arteries. It is not intended for use in coronary, carotid, pulmonary, iliac or renal vasculature.

Please consult package insert for more detailed safety information and instructions for use. BD, the BD logo, and Rotarex are trademarks of Becton, Dickinson and Company or its affiliates.
