CONFERENCE FACULTY

subject to change

The field of endoscopy has rapidly evolved with the introduction of innovative diagnostic techniques and novel therapies. The endoscopist frequently encounters difficult issues and controversies in patient management. “The Endoscopy Course” is designed for providers to better understand the current role of endoscopy in the care of patients with a variety of gastrointestinal diseases. Numerous challenging topics will be explored, including the basics of endoscopy, innovations in upper and lower GI disorders, gastrointestinal bleeding, and pancreas and biliary tract disorders.

In addition, this year’s course will feature lectures on new endoscopic interventions. As always, the highlight of this unique educational symposium are the debates between Harvard and Yale faculty on areas of endoscopic controversy.

Target Audience: This program is designed for practicing gastroenterologists, gastroenterology fellows, nurses, and advanced practice providers interested in the care of patients with gastrointestinal diseases and the latest information on state-of-the-art endoscopic diagnosis and treatment of these illnesses.

Testimonials

“I attended the course ...and loved it.

It was great to be able to interact with the faculty during the meeting and informally following the scheduled program - they were all extremely easy to access and eager to spend time with us answering questions and providing “tricks of the trade”. It was the best course of this type that I’ve ever attended.”

“I have been attending the course since its inception, and look forward to it every year - if you live on the east coast, it is a no-brainer - easy to get to, inexpensive, quality faculty, and in a great setting at a four-star hotel...”
